A
Project Report
On
"Manual & Automation Testing on BookMyShow"

Prepared by
Bhatt Bhoomi Kiritbhai (18IT012)

Under the guidance of

Prof. Bimal Patel

A Report Submitted to

Charotar University of Science and Technology

for Partial Fulfillment of the Requirements for the

Degree of Bachelor of Technology

in Information Technology

(8th Semester Software Project Major-IT447)

Submitted at

SMT. KUNDANBEN DINSHA PATEL DEPARTMENT OF INFORMATION TECHNOLOGY

Chandubhai S. Patel Institute of Technology

At: Changa, Dist: Anand – 388421

April 2022

CANDIDATE'S DECLARATION

I hereby declare that the project entitled **"Manual & Automation Testing on BookMyShow"** is my own work conducted under the guidance of **Prof. Bimal Patel** and **Mr. Pratik Mehta.**

I further declare that to the best of my knowledge, the project for B. Tech does not contain any part of the work, which has been submitted for the award of any degree either in this University or in other University without proper citation.

Bhatt Bhoomi
(18IT012)

Prof. Bimal Patel
Assistant Professor,
Smt. Kundanben Dinsha Patel Department of Information Technology,
Faculty of Technology & Engineering,
Changa – 388425.

COMPANY CERTIFICATE

AUGUSTCODE
SOLUTIONS PVT. LTD.

Date: 18th April, 2022

TO WHOM SO EVER IT MAY CONCERN

This is to certify that Ms.Bhoomi Bhatt has undergone an internship training at AugustCode Solutions Pvt. Ltd. from 3rd January 2022 with the Project name "Manual & Automation Testing on BookMyShow" with "QA" technology. She has successfully completed her project.

Bhoomi Bhatt did the exceptional work. We found her sincere, analytical and logical in approach and innovative as reflected during the project assignment. With this positive approach to learn and the harmonious relations maintained with colleagues, we are confident that she will do well in professional career as well.

We wish best of luck for a prosperous and the bright future.

From,
AugustCode Solutions Pvt. Ltd.

Authorised Signatory,
Pratik Mehta

805, SNS PLATINA, NR. RELIANCE MARKET, VESU, SURAT 395007

COLLEGE CERTIFICATE

CHARUSAT
CHAROTAR UNIVERSITY OF SCIENCE AND TECHNOLOGY

CERTIFICATE

This is to certify that the report entitled "**Manual & Automation Testing on BookMyShow**" is a bonafied work carried out by **Ms. Bhoomi Kiritbhai Bhatt (18IT012)** under the guidance and supervision of **Prof. Bimal Patel** & **Mr.Pratik Mehta** for the subject **Software Project Major (IT447)** of 8th Semester of Bachelor of Technology in **Information Technology** at Faculty of Technology & Engineering – CHARUSAT, Gujarat.

To the best of my knowledge and belief, this work embodies the work of candidate herself, has duly been completed, and fulfills the requirement of the ordinance relating to the B.Tech. Degree of the University and is up to the standard in respect of content, presentation and language for being referred to the examiner.

Under supervision of,

Prof. Bimal Patel
Assistant Professor,
Smt. Kundanben Dinsha Patel
Department of Information Technology
CSPIT, Changa, Gujarat.

Mr. Pratik Mehta

ABSTRACT

Keywords : Zephyr, Jira, Spreadsheet, Eclipse, Selenium, Python, Bug, Testcase, Automation, Test suit, Unit testing, Integration testing, Component testing, Contract testing, End to end testing, SDLC life cycle.

BookMyShow is an entertainment website. People usually use it for pre movie ticket booking. It is a real life project. The idea behind creating such a website is to save time, minimize efforts, increase security and facilitate the offline customers online in today's digital era. This website is widely used by people because the UI is user friendly. Anyone from any age group can use it without confusion. There are several modules are there Online & offline activities like online quiz competitions, online streaming event, offline bicycle racing, tourism, events like comedy shows, music shows, workshops, Sport activities like E-sport, online gaming, outdoor games, play booking etc… but it is mainly used for e-ticket booking. You will find frequent changes in websites when new movie arrives. It may possible that developer end up editing with a bug. Whenever there is a change in the code, no matter how small, bugs appear somewhere in system. Because of this, testing is an important aspect in software development. By enabling testing we can find the missing elements, accuracy, performance and quality of product before launching it or making it live. There is no such thing like defect-free system, we all make mistakes especially while making such a huge system. It is necessary to choose a language to develop a system, divide whole project into parts, start coding, integration of divided modules into one, this is long term process, It requires too much time and efforts. But we cannot end up with coding and integration, We need to maintain the quality of project. In solution to this we can use SDFC life cycle as per the project.

ACKNOWLEDGEMENT

I would like to express my special thanks and gratitude to our guide **Mr. Pratik Mehta** and my team leader **Bhagyashree Abdalwar** ma'am for constant guidance and encouragement in completing this project and also teaching us in the course. By doing this project I got enriched with many information which will help me in my future.

I am highly thankful to **Prof. Bimal Patel** for giving the guidance as an internal guide and H.O.D. **Dr. Parth Shah**, for the facilities provided to accomplish the internship. I would like to thank **Prof. Sanket Suthar**, department internship coordinator of CSPIT, IT for their support and advices to get and complete internship in above said organization.

Last, but not the least I would like to thank my family and friends for all the support and encouragement during my project. I would also like to thank my fellow students for many helpful discussion and good idea along the way.

1. INTRODUCTION

1.1 PROJECT OVERVIEW

- BookMyShow is an entertainment website. It provides service of movie ticket booking, event booking, sport booking etc.. It has third party integrations include ticket sharing, payment making through Gpay, PayTM, Netbanking, card payment. I have tested different modules namely: Login module, Profile and settings module, Movies, activity, buzz, sport, event modules, Gift card, corporator, offers modules etc. I found some bugs in websites through different testcases and created bug report for the same. I automate the login page and movie ticket booking page.

1.2 OBJECTIVE

- The main reason behind testing is to ensure the quality of the product and make software defeat free. We have practice to divide the project into modules and once we done, just integrate modules. There are high chances of software failure or vulnerability in software. To ensure these things testing is required. Testcases are designed during testing phase, which covers almost all the possibility. Once testing is complete, bug report generated and it passed to developer. Developer make necessary changes into code. Retesting also perform after changes.

1.3 SCOPE

- This project will help to improve some missing factors, finds vulnerability in website, helps to find UI/X related bug, Integration bug. I haven’t automate the payment module, Helps to fix some Functional, validation, performance, crash, designing related bugs. From these project developer will find severity and priority of fixing bugs and also finds steps for reaching to the bug.

1.4 TOOLS & TECHNOLOGY USED

- **Tools:**
  - Manual Testing – Zephyer for Jeera, Google Sheets
  - Automated Testing – Selenium, eclipse

- **Technology:**
  - Automated Testing - Python

What is manual testing ?

It is the process of manually testing software for defeat. It includes testcase id, testcase name, testcase scenario, pre-condition, testcase step, test data, expected result, actual result, comments.

What is bug report?

It is clear description of applicant's misbehavior, flow error or failure, or we can say a gap between expected result & actual result.

What is automation testing?

It is kind of testing which requires less or zero human efforts. It is fast, reliable, Reusable, Improves accuracy, saves time and money, reduces human generated errors, supports the execution of repeated test cases.

2. PROJECT MANAGEMENT

2.1 PROJECT PLANNING

2.1.1 Project development approach and justification(Process model used)

The agile model is based on iterative and incremental development, where requirements and solutions evolves through collaboration between cross-functional teams.

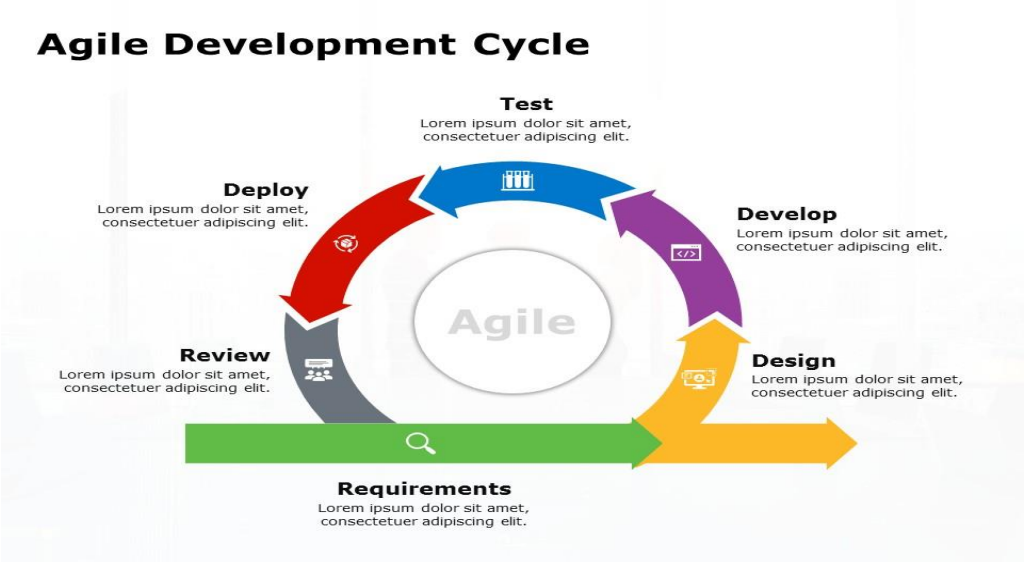

Figure 2.1.1.1 It describes agile work cycle. Firstly scrum team gathers all requirements, after that designing and development of software performed. After that testing phase perform and Once it's deploy, reviewed. If some changes are there then again whole process perform.

It can be used with any type of the project but it needs more engagement from the customer and to be interactive. Also, it can be used when customer needs to have some functional requirements ready in less than three weeks and the requirements are not clear enough.

Here In BookMyShow we need frequent change in website as new movie arrives or new activity, event, sport conduct. And there are several changes into offers or promocodes as festivals arrives, also in food availability in cinema. By seeing several aspects we can say Agile model is preferable.

2.1.2 Roles & Responsibility

This is solo project. Manual testing, automation testing and bug report creation is done by me.

Name: Bhatt Bhoomi Kiritbhai

Student ID: 18IT012

Task job: QA

2.2 PROJECT WORK SCHEDULING (GANTT CHART / PERT / NETWORK CHART)

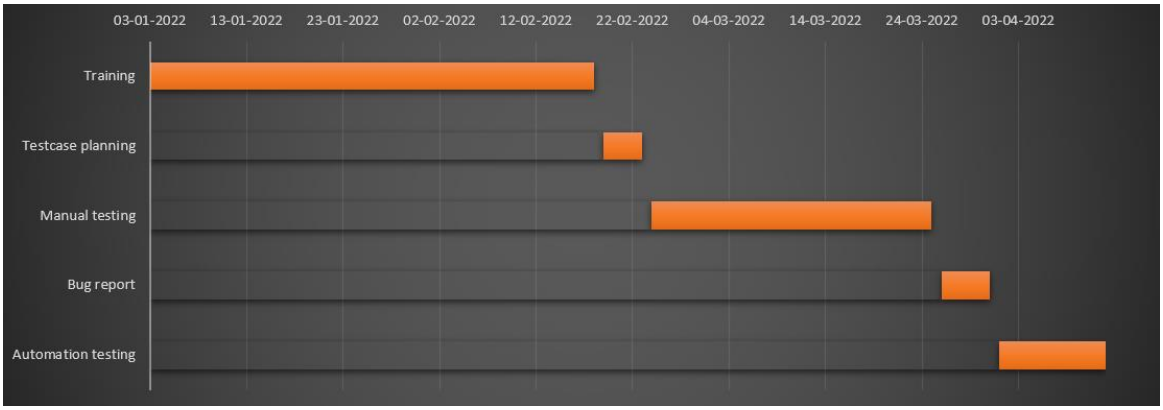

Figure 2.2.1 gantt chart for which represents work schedule of my project. From the data we can say I have taken much time in Manual testing because It performed in two way 1)Manually in excel sheet, 2)through zephyer software

3. SYSTEM REQUIREMENTS STUDY

3.1 USER CHARACTERISTICS

- Any type of user can book their tickets like A person outside cinema and operator of cinema both can book tickets as well as register for food too in a particular time slot. They can create giftcard and use promocodes while booking ticket. also anyone while proper information and talent can host their own live show like standup comedy, drama, online game streaming etc.

3.1.1 Usecase diagram

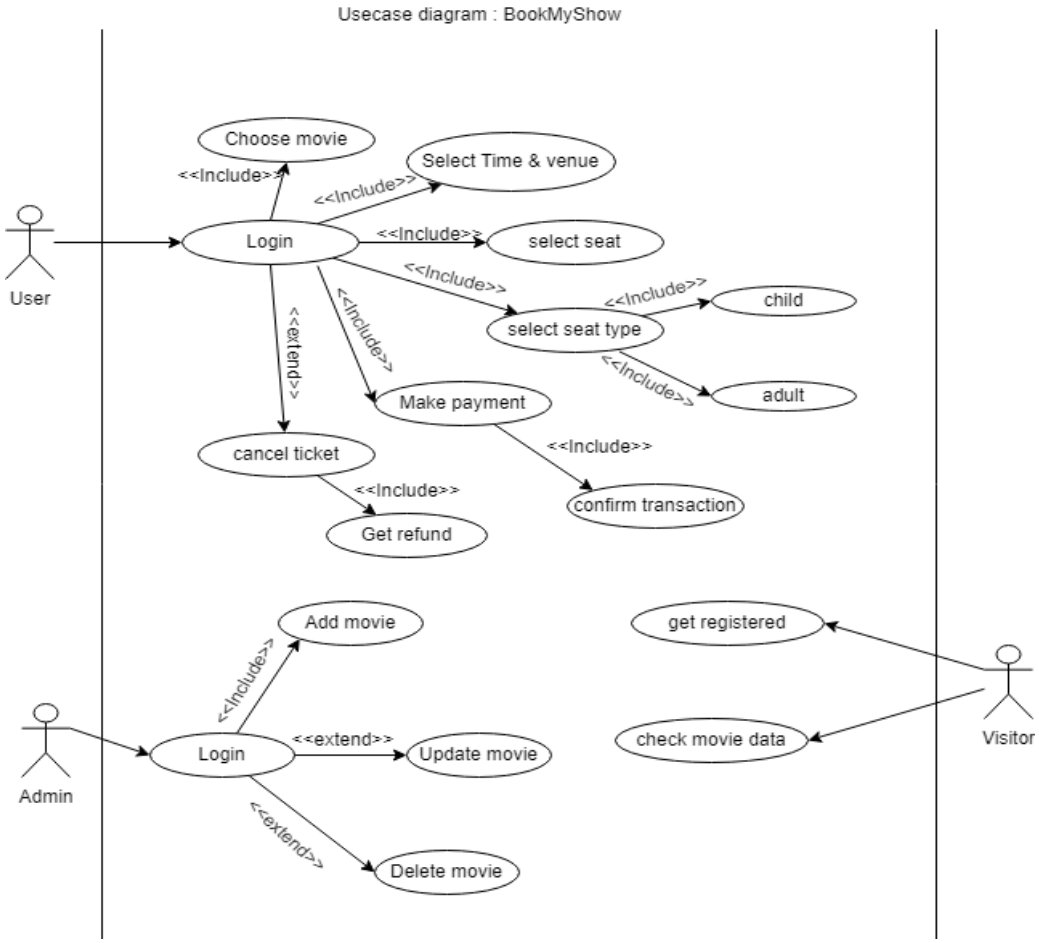

Figure 3.1.1.1 Usecase diagram of BookMyshow. Basically it represents dynamic behavior of a system. <<include>> for necessary condition and <<extend>> for not necessary condition. Three vectors different represents represent that how system will work.

3.2 HARDWARE AND SOFTWARE REQUIREMENTS

3.2.1 Hardware requirements

- Processor i3/i5/i7 8th gen or above
- RAM 3 GB or above
- Minimum Screen Resolution 2560 X 1600
- Good Internet Connection

3.2.2 Software requirements

- Chrome browser (version 94 or above)
- Google sheets
- Eclipse or any python IDE for running the project

3.3 ASSUMPTIONS & CONSTRAINTS

- The user have sufficient knowledge to deal with the interface of website.
- The User should aware of English language as the interface provided in English language.
- User must have a good internet connection.
- User should have credit / debit card details, online net banking details, Gpay incase of e-ticket booking.
- User should have a working email or phone number.
- Fairness is mandatory in system. (Every user get chance if seats available but in fair manner FCFS approach)
- We can restrict users from booking more than 10 seats at a time to stop system abuse.
- The system is scalable, If traffic spike as most awaited movie or popular movie arrives. The seats would fill up pretty fast.
- The system will not allow you to book partial tickets either they will all the tickets or none.

4. SYSTEM ANALYSIS

4.1 STUDY OF EXISTING SOLUTION

- Bookmyshow helps to book ticket on place or outside place. Even you can book your tickets from another state in case the movie or show is not available in your city. You will get ticket of your booking in your registered number or you can collect it to box office itself. Even you can register for meal inside box office or outside. You will find online and offline payment option. You can book your ticket in advance mode as well. From website you will get rating and reviews of movie or show.

4.2 LIMITATIONS OF EXISTING SOLUTION

- The website is accepting invalid emails as well. Developer need to put some email validation feature in case of any unnecessary drama like suppose a user books a ticket with non-existing email and once payment finishes they will not get their ticket because of invalid email.
- The website contains so many unnecessary features like corporates, gift cards.

4.3 REQUIREMENTS OF PROPOSED SYSTEM

4.3.1 Functional requirements

1) Login page :

Input : Email / Gmail / phone number / Apple ID and OTP

Output : User will redirects to homepage.

Description : On successful login user will redirect to home page. User have to enter correct otp within time limit if not so user will get chance to resend otp to entered email or mobile number.

2) Home Page :

Input : NA

Output : It shows all the features available in website.

Description : User will find all ongoing and upcoming movies, plays, events, activities, sports.

3) **City selection :**

Input : City name

Output : list of available city

Description : User able to select city as per availability and as per their choice.

4) **Profile Page :**

Input : First, last name, Date of birth, address, pincode.

Output : updated user profile.

Description : All necessary information to identify a unique user will be shown.

5) **Search movie :**

Input : Movie name, language, genere, format, city

Output : Movies as per availability.

Description : All the filtered movies displayed as per user input.

6) **Seat viewing :**

Input : Movie name, date, time slot, cinema name

Output : available seats as per given input

Description : User can see all the available seats in cinema and their prices.

7) **Ticket booking :**

Input : Movie name, user information, date, time, cinema name

Output : as per availability data generated.

Description : If seats available then it moves ahead else shows box office full message.

8) **My Bookings :**

Input : NA

Output : All the booked tickets details.

Description : User will find tickets if he/she has booked recently, user will not find expired tickets. If no booking is there then simply a message of No current bookings.

9) Ticket cancelation :

Input : Ticket number

Output : display that ticket existing or not.

Description : On successful cancellation user will get committed refund or in case of no bookings not existing ticket message.

10) Food ordering :

Input : Add food and quantity

Output : Information displayed as per given input

Description : User can add/ remove food of their choice and add quantity.

11) Payment :

Input : card details / net banking credentials & otp

Output: Ticket booking or failed message.

Description : On successful booking the payable amount will be deducted from user account and user will get tickets.

12) Logout :

Input : NA

Output : Unable to see any use information and not able to book ticket because of no user details.

Description : On successful logout all the user information got vanished.

13) Seating arrangement of cinema should be displayed so the user can choose and book their tickets as per requirements.

14) The user should be able to distinguish available seats from booked once.

15) User should hold their seats for 10 minutes before they finalize the booking. When seat holding time expires, user have to reselect seats if available and make payment.

16) User can wait for seats, If seat hold by other user expires and in case of seats might available then user can book it.

17) At a time user can only book 10 tickets, to stop system abuse.

18) Waiting customers should be served in fair manner, It uses first come first serve approach.

19) Either all tickets are booked or none. There is no system like partial ticket booking.

20) System should be scale up to certain amount as arrival of popular or most awaited movie, It may possible that the seats may get fill pretty fast so the system should highly available to keep up with the surge in traffic.

4.3.2 Non functional requirements

1) Security :

- There must be authentication and email/mobile number verification functionality and also some one time password kind of strategy must be used to avoid uncertainty.
- A user will only allow to access some features if he/she has been successfully logged in.
- User have to enter otp within time limit, if time limit exceed then user have to ask for resend otp.
- A user will allow to ask for certain numbers of otps, once the limit exceed the user will not allowed to login for certain time or days. Or we can say it will lock the account of user.

2) Usability :

- The web application's UI should be user friendly and it must be easy to use.
- Naming convention of the feature should be understandable. For ex if someone wants to book ticket then the navigation process should be understandable by user. And also use of feature be

understandable. Like if someone wants to host live event then they can do it with or without guidance of other user.

3) **Performance :**

- It is an important factor to check quality of product. It means developer has to build product in such a way that in certain amount of time, a certain tasks have been performed.
- Performance is one of the important factor in any product. It saves time and money as well as the battery like of a cell phone.
- If you want to create a program which will sort array of number then from datasets you can select an algorithm for ex. If already sorted arrays are then then insertion sort algorithm will use but it is not preferable to use quick sort because it is wasting of time & money and also it is less effective.

4) **Reliability :**

- All errors that could occur must be handle in proper way. In case of any error the user should be notified with a proper message.

4.4 SYSTEM WORK FLOW

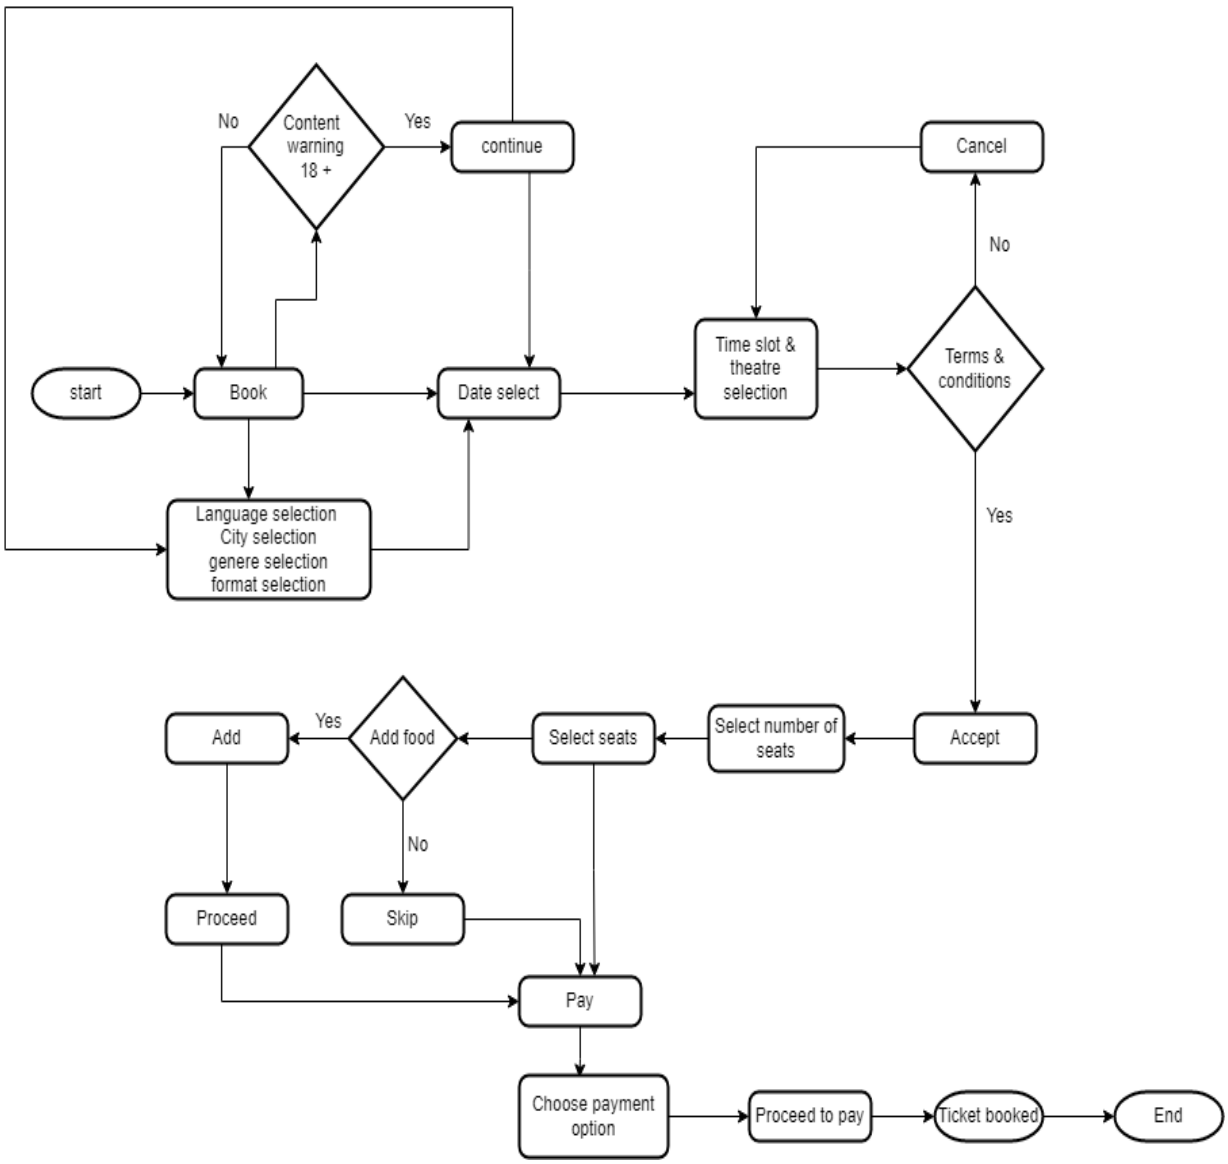

Figure 4.4.1: It represents that what is the flow of program. In what condition is starts, in which it terminates. How it behaves for certain conditions. It is basically a design representation of program.

4.5 ER DIAGRAM

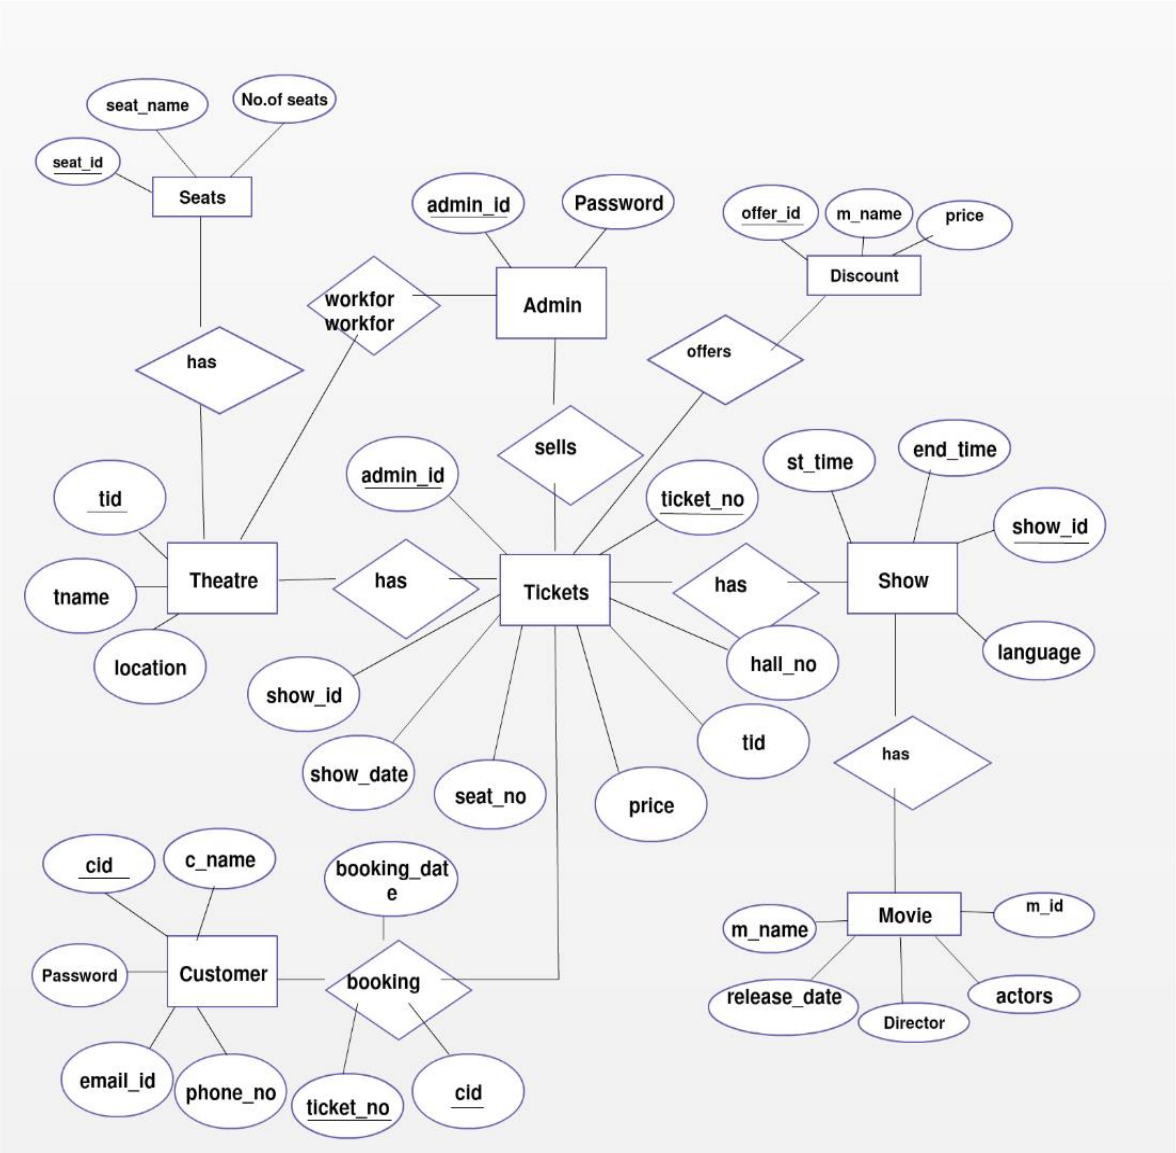

Figure 4.6.1: ER Diagram of BookMyShow. __ line represents primary key, eclipse represents attribute, rectangle represents entity, --- represents relationship of one entity with other entities. Dimond represents relationship between two entities.

4.6 DFD DIAGRAM

4.6.1 DFD Level 0

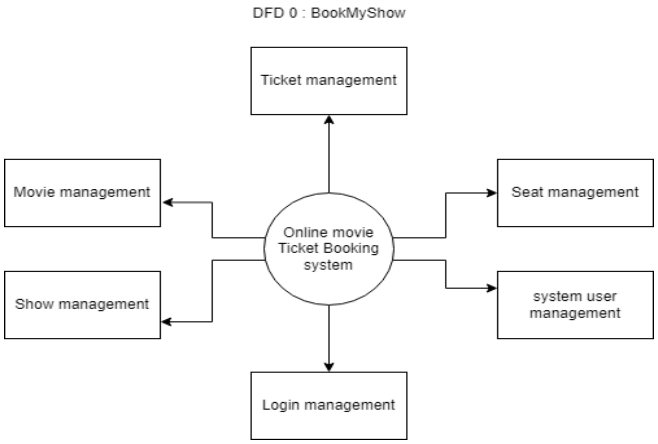

Figure 4.7.1.1 dfd level 0 or context diagram. It describes the basic overview of whole project.

4.6.2 DFD Level 1

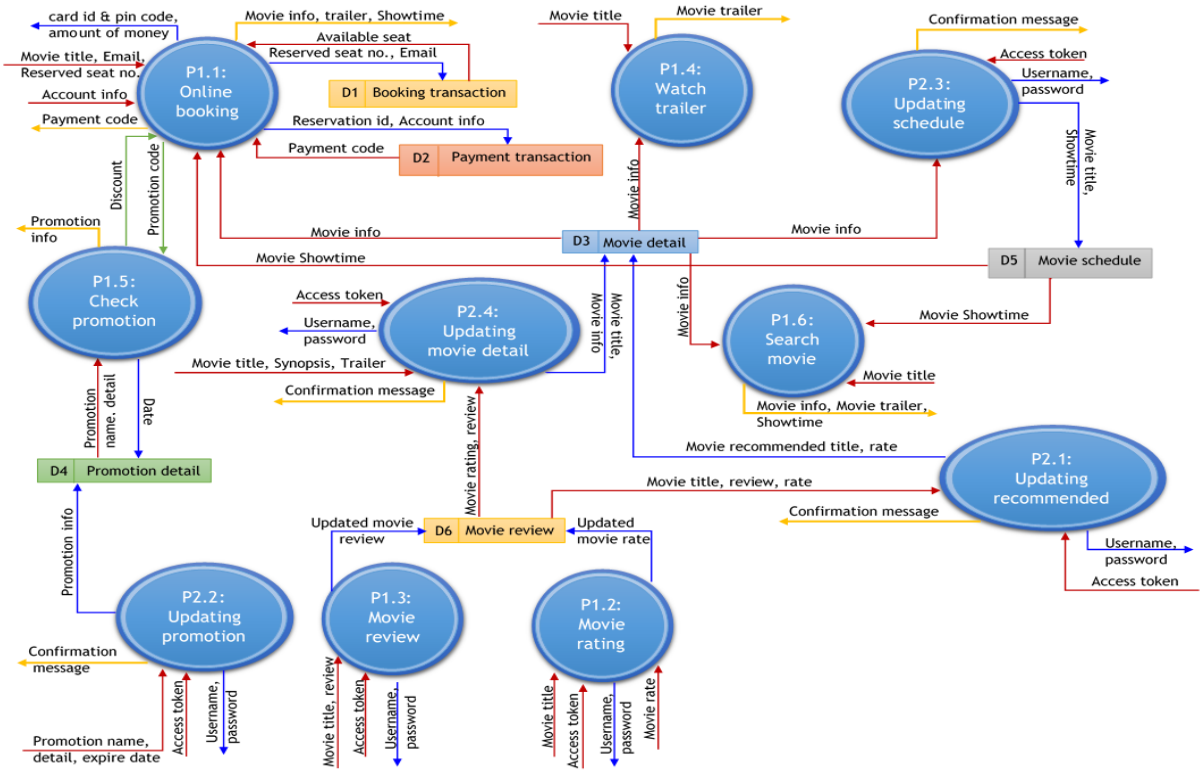

Figure 4.7.2 DFD level 1. It is the context diagram which is decomposed into multiple processes. It displays more detailed breakout of pieces of the context level diagram

4.7 DATABASE SCHEMA DESIGN

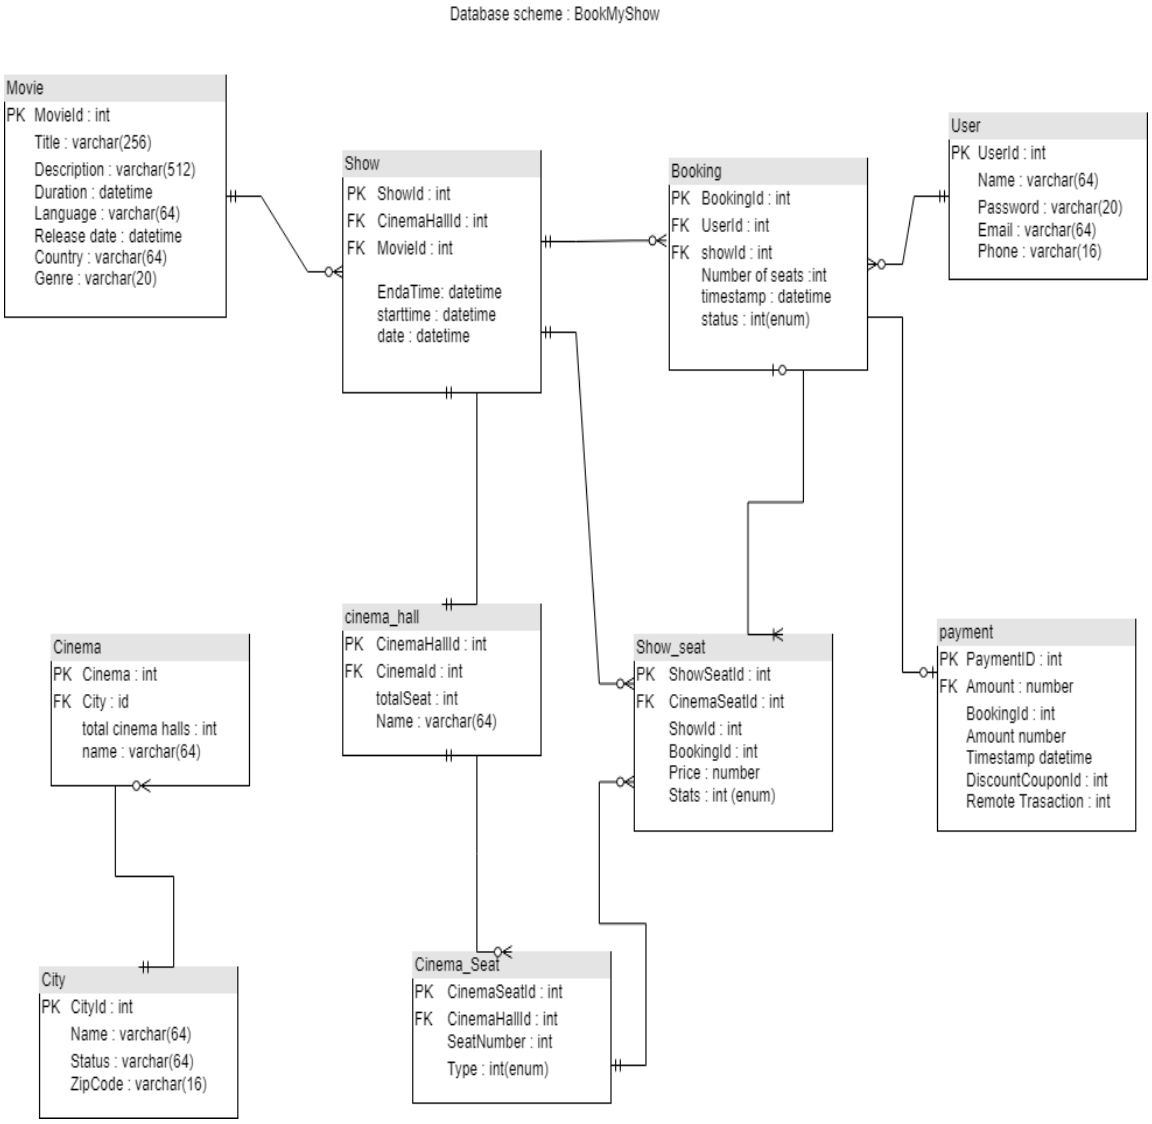

Figure 4.8.1 sample database design of BookMyShow. PK represents primary key and FK represents foreign key. Some of having many to many relationship and some having many to one or one to many relationship.

5. SYSTEM IMPLEMENTATION AND TESTING

5.1 SYSTEM DESIGN

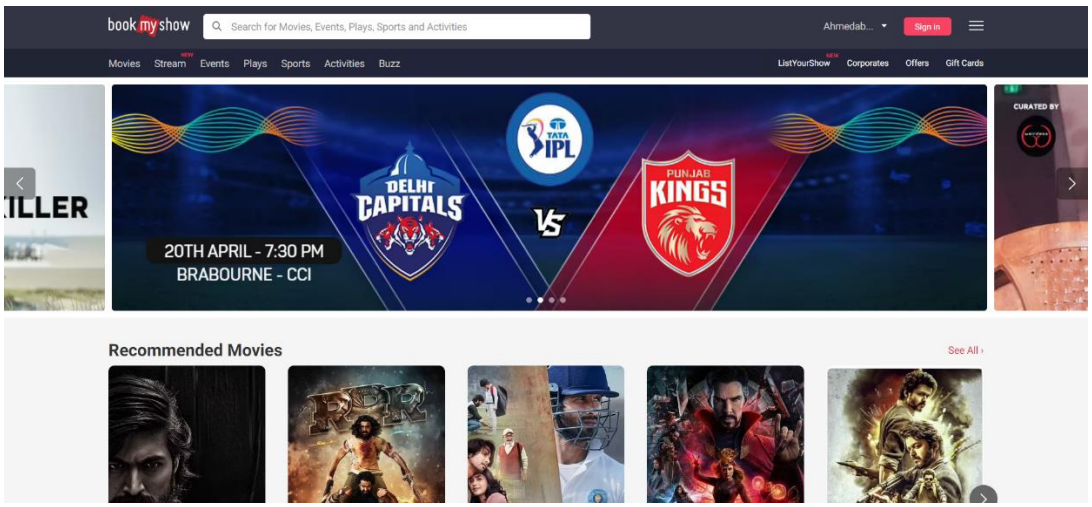

Figure 5.1.1: HomePage of BookMyShow. You can find data related movies without login but if you want to book ticket then login is necessary.

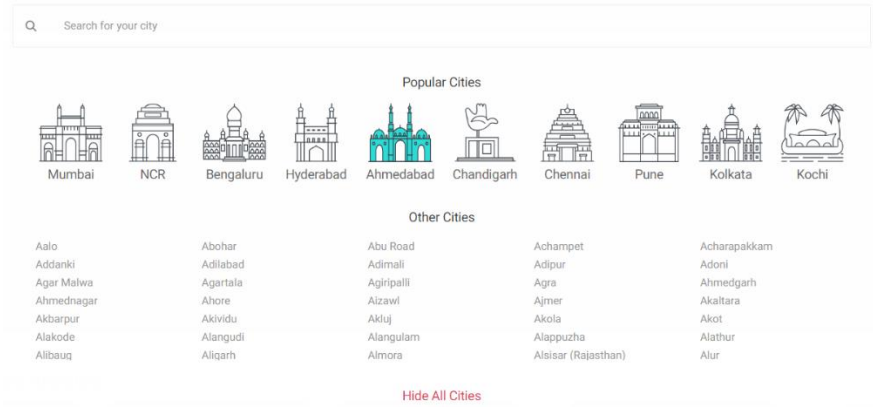

Figure 5.1.2 : You age given all the cities in which BookMyShow gives their service. either You can select manually or you can select by searching them.

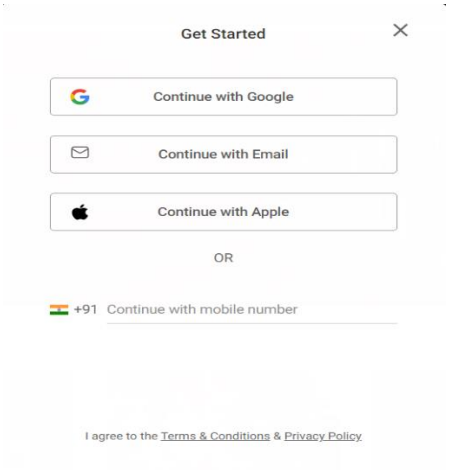

Figure 5.1.3: Sign up page. You get 4 options for login. 1)through Gmail, 2) Via Emai(yahoo/ Rediff etc..), 3)by Apple ID or 4)from Mobile number..

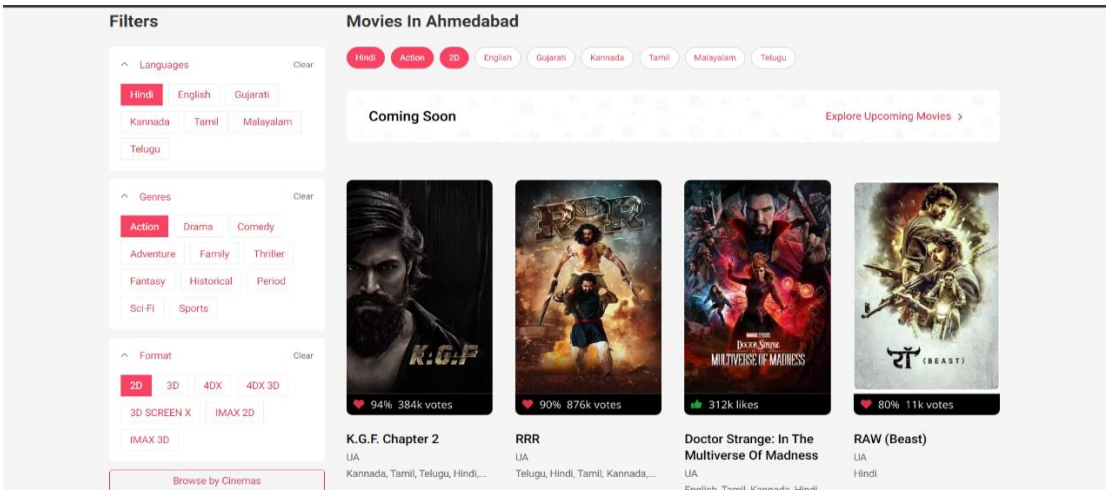

Figure5.1.4: Movies Page, All movies filter as per input. Here I have Selected Hindi language, Action genre and 2D format movie

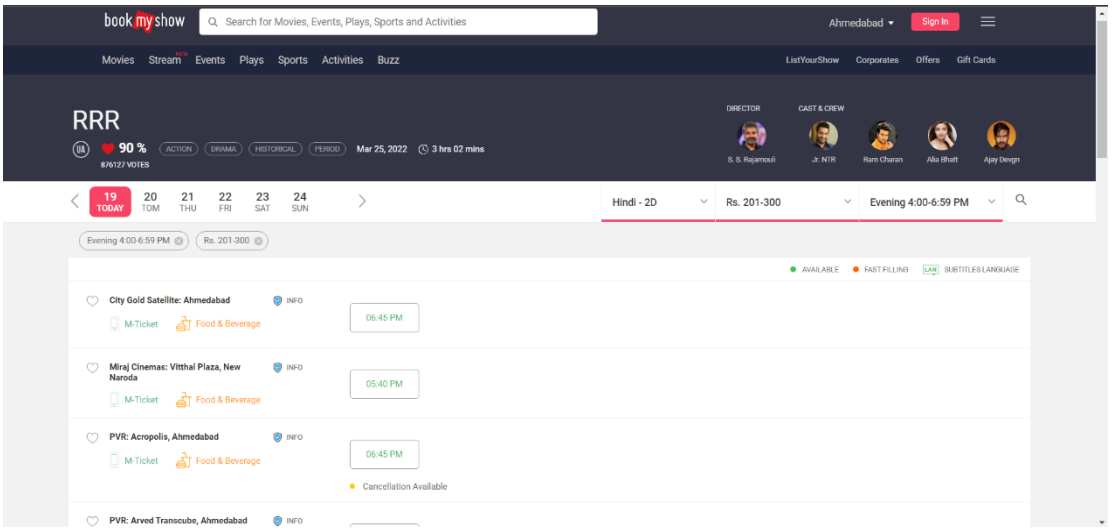

Figure 5.1.5: you will find List of cinema date & time wise. You can select as per it's availability and your convenient.

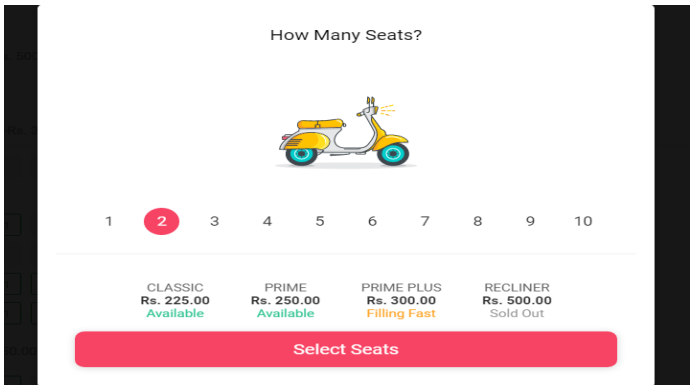

Figure 5.1.6 : no of seats for selected show. You cannot choose more than 10 seats. You will find detailed description of which tier seats available.

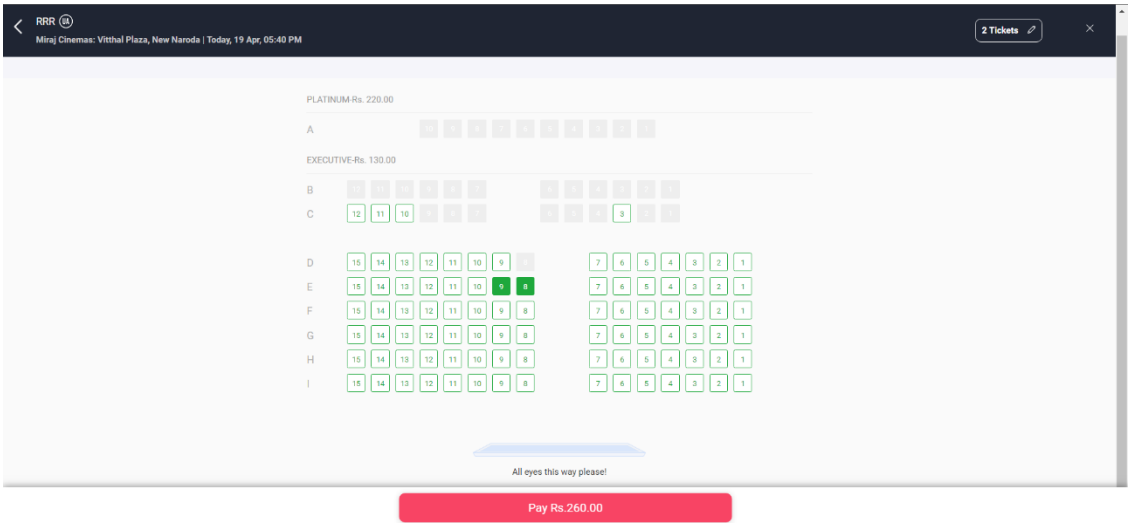

Figure 5.1.7: seat selection with seating arrangement in a particular cinema

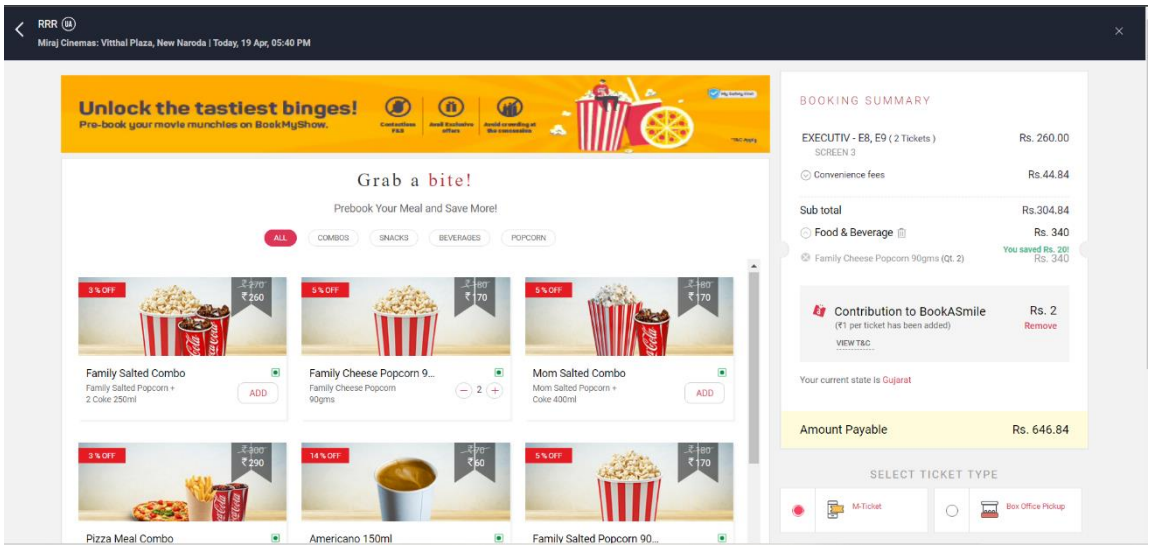

Figure 5.1.8: Food add on option, mobile / box office ticket pickup options and whole bill generated.

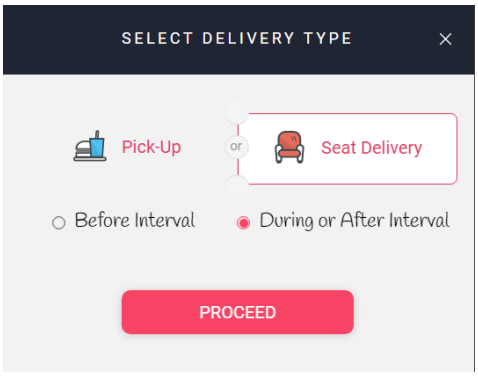

Figure 5.1.9: Either food pickup or seat deliver option with before interval or after/during interval options given. You can choose either of them.

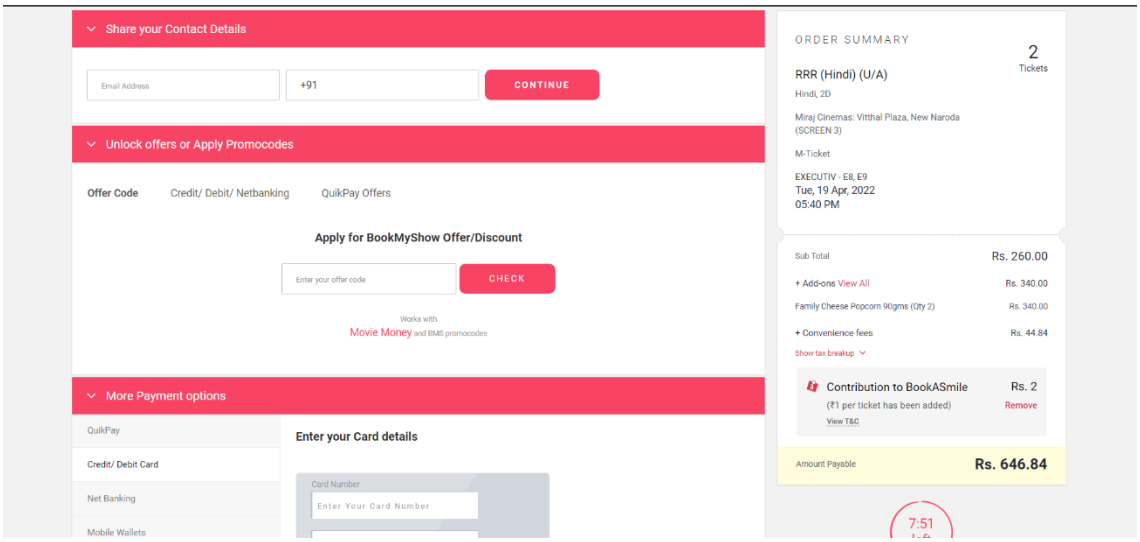

Figure 5.1.10: all the information displayed in final bill date, time, cinema, no of tickets, food and final price.

5.2 CODING STANDARDS

It defines a programming style. It gives a common look and feel to understand program easily. Most software development organizations formulate their own coding standards that suits them most require their engineers to follow these standards rigorously because it gives a uniform appearance to the codes written by different engineers. It provides sound understanding of the code. It encourages good programming practice. For server side BookMyShow uses Ruby and for client side it uses javascript language.

Also It is more focus on well formed html code, Pick id, class name, tag name as per standards of their organization. It must be as small as possible in length and also understandable. Standardizing character case is also important aspect. Again consistency is absolutely a prerequisite for maximizing maintainability and reusability.

5.3 TESTING STRATEGIES

It is a high-level document describing the way testing is carried out. The scope is at organization level. It is generally prepared by project manager. It describes the high-level test design techniques to be used, environment specifications etc. The major components of test strategy include scope, objective, business issue, risks, testing approach, testing deliverables, defect tracking, training, automation etc. Test strategy is divided into multiple test plans that are taken care further independently.

Figure 5.3.1 Given figure represents different Testing strategies used by a QA tester to check quality of product.

UNIT TESTING :

Each part or unit of the application will be tested individually. Unit testing provides a strict, written contract that the piece of code must satisfy. Usually it carried out by developers rather than engineers because it requires detailed knowledge and understanding of internal design and code.

SYSTEM INTEGRATION TESTING :

Individual solution modules and components are tested against the functional and integration requirements. Test all interface and application components within the solution. Integration Testing is the process of testing an application with two or more integrating components. It is performed once the individual components have been unit-tested, and aims to identify problems with the interfaces and the interactions between them.

COMPONENT TESTING :

Component testing or we can say module testing. In component testing, testing performed on each individual component separately without integrating them with each others.

CONTRACT TESTING :

A failure in any of these contract tests implies you need to update your test doubles, and probably your code to take into account the service contract change.

END TO END TESTING :

In end to end testing, Need to deploy multiple services together in a separate environment. More scope, will take longer to execute. It helps to figure out deploy which version of each service. Harder to diagnose errors. Multiple end-to-end tests result in redundant test coverage.

SECURITY TESTING :

Security testing should be inclde application security, integration security and data security.

5.4 TEST SUITES DESIGN

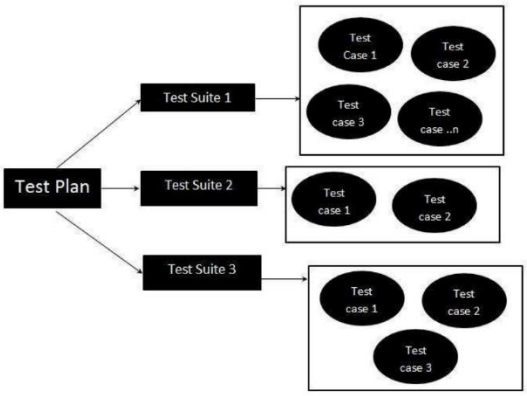

Figure 5.4.1 Given figure represent test suit design

It is a collection test cases. It is designs after test case plan. It helps testers in executing and reporting the test execution status. Mainly It has three states namely, Active, completed, In progress. I have used zephyr for manual test suit design. It is integrated with jeera. It is very useful while working in a team. Every tester assign task and deadline to complete the task.

For this project Black box testing is performed. Because there is no prior knowledge and internal system design knowledge required. Tester have to give input and observe output. Manual and automation testing is performed and also bug report generated for the website.

5.5 TESTTING METHODS

5.5.1 Manual testing

It refers to a test process in which testers manually tests the software application in order to identify bugs. There are pros and cons of this kind of testing like It is easy to hire, It is versatile and applicable to many test cases. It is flexible and easily adapts the changes in UI design. Above mentioned are pros of manual testing. Coming to cons. That It may or may not detect all defects in system, Highly expertise needed when it comes to complex cases, It is a very time consuming process.

A test case contains Test case id which uniquely identify each test case, test case name, test case description, precondition, Test case steps, Expected result, actual result, result etc. so based on some specific conditions given by owner, the tester compares actual and expected result and based on that tester comes to know that product is functioning as per requirements or not.

5.5.1.1 Manual testing in excel sheet :

Test Case ID	Module Name	Test Scenario	Test Case	Pre-requisites	Test Data	Step	Test Step	Expected Result	Actual Result	Status	Comments	Defeat ID

5.5.3 Automation testing

It is a kind of testing which requires less or no human effort. We can say It is more reliable compare to manual testing because it is performed by tools and/or scripts. It's also faster than manual because it is executed by software tools. But investment is required for testing tools. We can say it is a practical option when the test cases are run repeatedly over long period of time. Automated testing does not entail human observation and cannot guarantee user friendliness or positive customer experience.

We are using it because it is fast, reliable, reusable, Improves accuracy, saves time and money, reduces human generated error, supports the execution of repeated test cases. It involves testers who write scripts. Testers use appropriate automation tools to develop the test script and validate the software. The goal is to complete test execution in a less amount of time.

There are Mainly 4 stages followed in Automation testing.

1. Test tool selection.
2. Define scope of automation.
3. Planning, design, development.
4. Maintenance.

In very first stage I have selected my tool as selenium. Secondly I have define scope of my testing for example for Login Module 1. Login with Mobile number 2. Login with email. For pre movie ticket booking I have taken whole module as my scope of automation. Thirdly I have used eclipse for writing testcase scripts and chrome driver to execute script. And last but not least I have taken number of testcase inputs and tested the website successfully.

Here you will find automation of ticket booking.

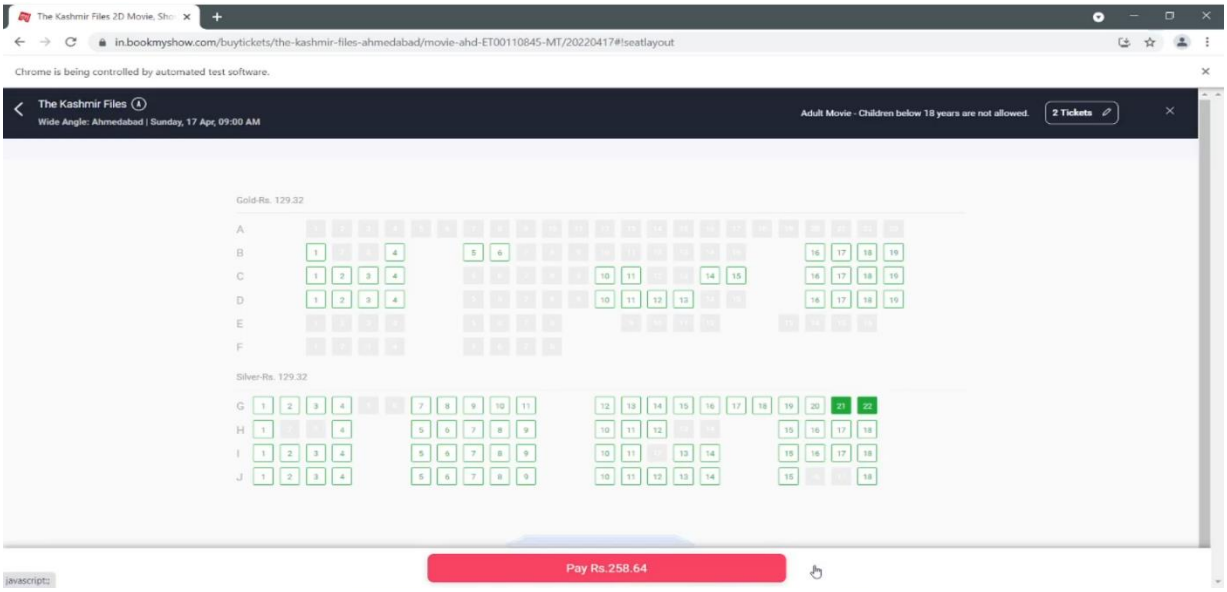

Figure 5.5.3.7 seat selected as per availability by automation.

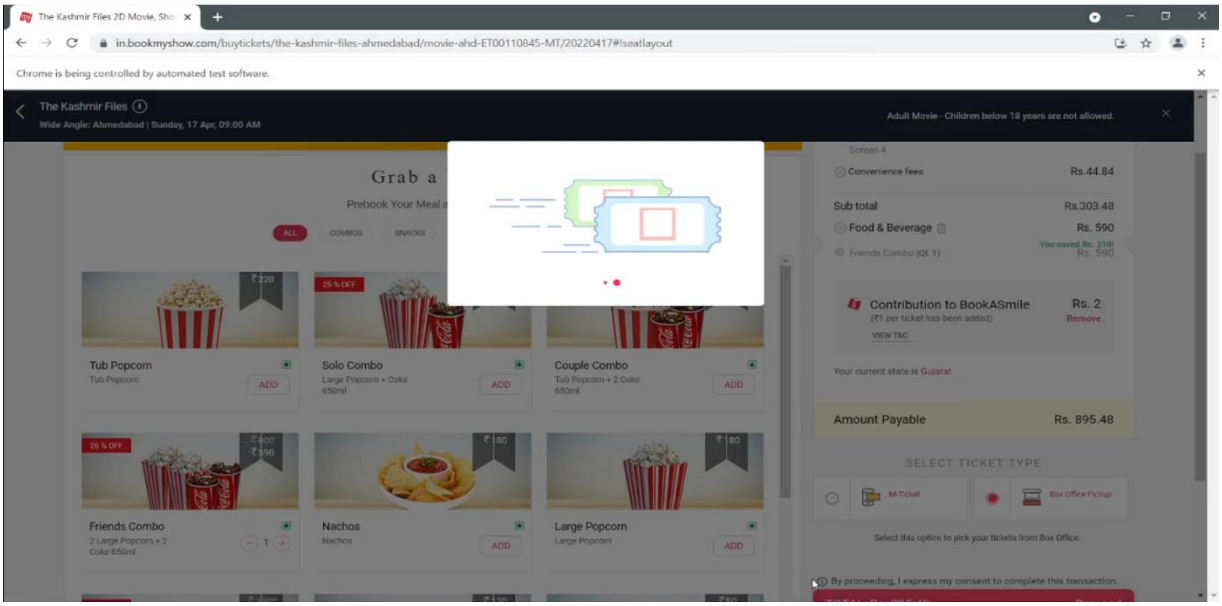

Figure 5.5.3.8 food added as per input, automatically.

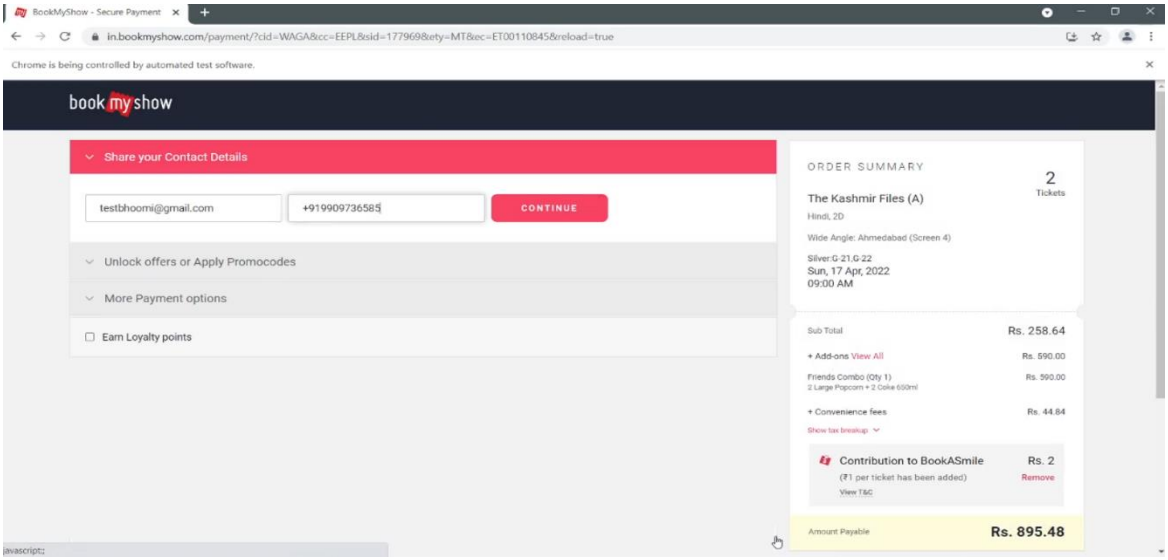

Figure 5.5.3.9 email & mobile number automatically set as per input.

6. FUTURE ENHANCEMENT

Since the world is constantly developing and everyone is getting busier and busier, so automation has a great scope in future. As it greatly helps in saving time, In present time, my code helps in booking the seats for the user and hence ensuring the seats for him/her even in an almost full theatre. Plus, if a company uses this code and transform it into app, I believe that it would be a great success since it saves time plus it is very easy and safe to use. The security is not compromised as the user has to enter payment details himself.

I am thinking of automating other features inside app like activity, event, sports module, hosting section etc...

7. CONCLUSION

This is learning purpose project. BookMyShow is live project and it must be bug free but I found some bugs inside it so I have taken this project, I tried and found as many bugs as I can. I have created bug report for encountered bugs. And also try to automate BookMyShow.

7.1 SELF ANALYSIS OF PROJECT VIABLILITIES

Before this project I always wondered how bots functioned but after doing this project I got an insight in their functioning and how they are developed. I learnt a great deal about automation from this project.

Moreover, I learnt about the security features of websites like Google, Facebook etc. and how these websites protect their content from automated bots. I also learnt about captcha and why it is used. All in all, it was a great experience doing this project and I learnt a lot from it.

7.2 PROBLEMS ENCOUNTERED AND THEIR SOLUTION

Building this code was not that tough. First I learnt all that was required from YouTube. Then I started writing the code, checking it at each step. But internet was the main problem, sometimes it was slow and sometimes fast, hence before the button to be clicked was loaded, the clicking step got executed. As a consequence, the code stopped and error got reported. Hence I included the idea of explicit wait. This stops the code temporarily until the page is completely loaded.

7.3 SUMMARY OF PROJECT WORK

I have performed manual testing, Automation testing and generated Bug report on a website namely “Bookmyshow”. It’s a entertainment ticketing website which provides services for pre booking tickets for movies, events and sports. It has third party integrations included for sharing tickets and making payments through

different options such as G-pay, Paytm, net banking, etc. I have tested different pages namely: Login module, Profile module, Settings, Movies, Sports, Buzz, Activities, play, Corporators Events, gift coupon module etc. I have used Zephyr for manual testing. The Zephyr for JIRA application allows you to organize, author, manage, search, plan, execute and report on your testing activities for projects that are actively being managed in JIRA. I have created Bug report manually in excel sheet. For Automation Testing I have used Selenium tool and python as my scripting language
